1-1 Journal: Self-Introduction

Self-Introduction

My name is Carlos Aguirre, I live in Los Angeles, California and I started my Computer Science journey back in 2018. It has been a long process due to personal matters, but I am happy and excited to finally complete my degree at SNHU.

Throughout my journey in the program, I learned several important skills, but I would say that the three most important ones are:

- Problem solving and logical thinking skills.
- Object-oriented Design
- How to collaborate in a teamwork environment.

I am currently working as a Software Developer in a law firm in Los Angeles, CA. I came in as a junior developer, but I have been working there already for a little bit over a year. I have learned so much. At the firm, my team and I help create systems and processes to improve the firm's operations. We created several proprietary in-house web applications that legal assistants and attorneys use in a daily basis.

As for my specialization, I am currently working as a full stack engineer, I want to be able to master and then move to my next chapter.

I have been interested in learning more about IOS development and Data science. I know that those are two completely different paths, however I will explore them both and see which one is best for my career.
